Horsemanship and Horseback Riding Program

The history of humanity was changed by the horse. These amazing prey animals allow humans - a predator- to ride them, direct them and be-friend them, when almost every instinct tells them to run from predators. But they are gregarious and curious animals, and those two characteristics allow us to discover so much more about them...and ourselves. Horsemanship, equine husbandry and horseback riding teach us to be patient, compassionate, committed, and grateful. Horses make us better humans.
